

Wells Recirculating Ventless Hoods – Getting Started

Before you order a Wells Ventless System please review the following suggestions to ensure a trouble-free experience.

- Choose the model(s) that best suits your needs: (over 20 models to choose from)
- Read the specification sheet, owner's manual and watch the videos before ordering.
 - Available at wells-mfg.com
- Dimensions, Clearances, and Measurements: verify the appliance will fit, that there is adequate vertical clearance and that the hood can be maneuvered into the space. Measure twice, order once.
- Ask Wells to check your equipment list to verify everything fits and is UL compliant.
 - Use all Star/Lang/Wells/Toaster/APW/Bakers Pride/Southbend equipment under the universal models will upgrade your warranty for FREE!
- Pull permits: Fire system, electrical and mechanical permits may be required in your area.
- HVAC: A well ventilated space is needed. We recommend you have an engineer or mechanical contractor review your plans and existing HVAC system.
- Electrical: Verify that sufficient electrical service is available to power the cooking equipment. Note that the control panels on some models require an interconnection with the cooking appliances that is not included.
- Fire Protection: Speak with a local licensed Ansul agent before ordering. Can they do a R-102 Fire suppression system? Does the building have a fire alarm panel? Is a remote pull required at way of egress? Charging and tagging the Ansul system must be performed by a licensed ANSUL agent and is not Wells responsibility.
 - WVU-31CT and WVC-46 require additional Ansul parts supplied by others
- Wells Ventless systems are made-to-order and are non-refundable, so do your homework and ask questions. We are here to help.
- Fill out the Wells Ventless Application and turn in with your order.
- Place your order
