OPEN KITCHEN

The ONE IoT-Based Solution to Enhance Kitchen and Facility Performance

Open Kitchen® from Powerhouse Dynamics is a powerful enterprise equipment and energy management platform that provides multisite operators with intuitive controls and analytics to reduce energy and maintenance costs and enhance kitchen performance. Save up to 20% on energy expenses, better manage your kitchen equipment and gain full visibility into your operations.

✓ Lower your operating costs

✓ Create consistently comfortable conditions for your customers and staff

✓ Increase equipment uptime and optimize performance

✓ Reduce food safety risks

✓ Improve product quality

A single, configurable and secure platform with integrated modules to monitor, control and optimize your equipment ecosystem

Connect, Analyze and Control

Connect and monitor your kitchen equipment, as well as automate facility functions like refrigeration monitoring, food safety reporting and HVAC control with just one platform.

Modular and Secure

Open Kitchen is available in three applications: one for connected equipment, one for food safety and a third for equipment and energy management. These applications can be configured together or separately to meet your needs. It's also Level 1 PCI Compliant to completely protect your sensitive data and your brand.

Equipment and Energy Management

With centralized HVAC, lighting and equipment control, you can balance comfort and energy use. The energy and equipment management application delivers enterprise-wide visibility and reduced operating costs.

// Enterprise HVAC controls
// Remote equipment and lighting control
// Advanced equipment monitoring and analytics
// Enterprise exception reporting and alerts
// Equipment data capture and tracking
// Smart refrigeration defrost controls

Connected Equipment and Food Safety

The connected equipment and food safety applications go beyond temperature monitoring to capture and analyze an unprecedented amount of kitchen equipment data and deliver an end-to-end, on-premise food safety solution.

// Wireless temperature sensors
// Mobile app with Bluetooth probe
// A single view of equipment from multiple OEMs
// Real-time food safety alerts, plus exception reporting
// Automated HACCP reporting
// Remote recipe distribution and recipe creation hub
